Biography

Beth Hundey is an eLearning and Curriculum Specialist at the Teaching Support Centre at Western University. Together with the eLearning team, she supports the meaningful incorporation of technology into teaching and learning in the online, blended, and face-to-face learning environments. As a member of the curriculum team at the Teaching Support Centre she supports continuous curricular improvement at the course and departmental levels. Beth is a passionate educator whose graduate and undergraduate teaching in physical geography, environmental change and biology have brought her from the large lecture hall, to Western’s Active Learning Space, to field courses in Ontario and northern Sweden. She completed her doctorate in Geography (Environment and Sustainability) at Western University in 2014, and her interdisciplinary research involves identifying sources of pollution to remote mountain lakes using stable isotopes and analysis of lake sediments. Recent collaborations have Beth researching graduate student perceptions of the role of science communication in graduate training.
