

What We Have Learned From Coordinators

Family Math Coordinators found the Coordinator Training to be very effective. The Training Manual was well-received and reported to be very helpful when preparing to train others.

Family Math Coordinators have trained over 400 individuals throughout Ontario in 2004.

Family Math Coordinators prefer to work in pairs when delivering training workshops. Often Coordinators travel outside of their own region to provide these sessions.

The Coordinators expressed an appreciation of Esso Team members who assisted and mentored them during their first training workshops.

Many Coordinators promote Family Math by providing information sessions to community groups, such as early childhood educators, childcare providers, school personnel and library staff.

Family Math Coordinators feel confident that they can continue the work of the Esso Family Math Project. However, they feel they could benefit from networking opportunities. They have suggested a yearly get-together, professional development opportunities, as well as a regular newsletter.
